Proven Pipeline Integrity

Since our start in 1952, Stupp's passion is producing the pipelines that form the backbone of our continent's energy infrastructure.

From our rail-served campus just minutes from the Port of Greater Baton Rouge, Louisiana, Stupp is ideally positioned to supply a comprehensive size range of custom steel line pipe and a robust portfolio of integrated services—all designed to make your next project a success.

Although Stupp's capabilities have expanded over the past six decades, our mission is the same. Our customer focus, innovative solutions, unparalleled experience, and trademark quality give our partners an extra edge in completing their jobs ahead of schedule and under budget.

Integrated Services

- On-site Coating
- Welding Solutions
- Logistics
- Storage
- Offloading
- Field Service
- Inspection
- Traceability Solution

Comprehensive Product Offering

Specifications – API 5L B up to Grade X80, CSA Z245.1 up to Grade 550 Category II, ASTM standard grades also available

HFV

10" to 24"
outside diameter

0.250" to 0.625"
wall thickness

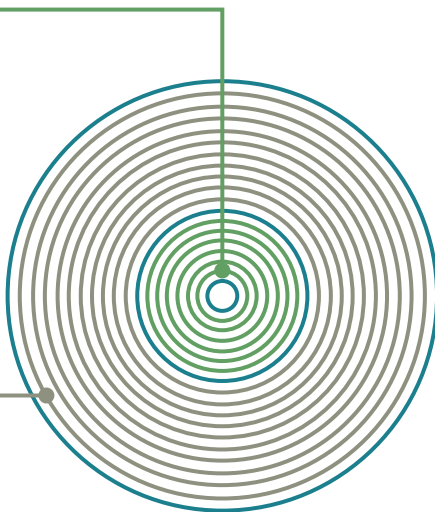

up to 80'
length

SAWH

24" to 60"
outside diameter

0.250" to 1.000"
wall thickness

up to 80'
length

Customer Focus

At Stupp, our customers' needs are the core of everything we do. From our custom pipe sizes and flexible scheduling to our integrated service offerings, Stupp's goal is to streamline your project from specification to commissioning.

International pipeline operators and small midstream companies alike know that they can rely on Stupp to deliver on our commitments and provide creative solutions to complex challenges.

Innovative Solutions

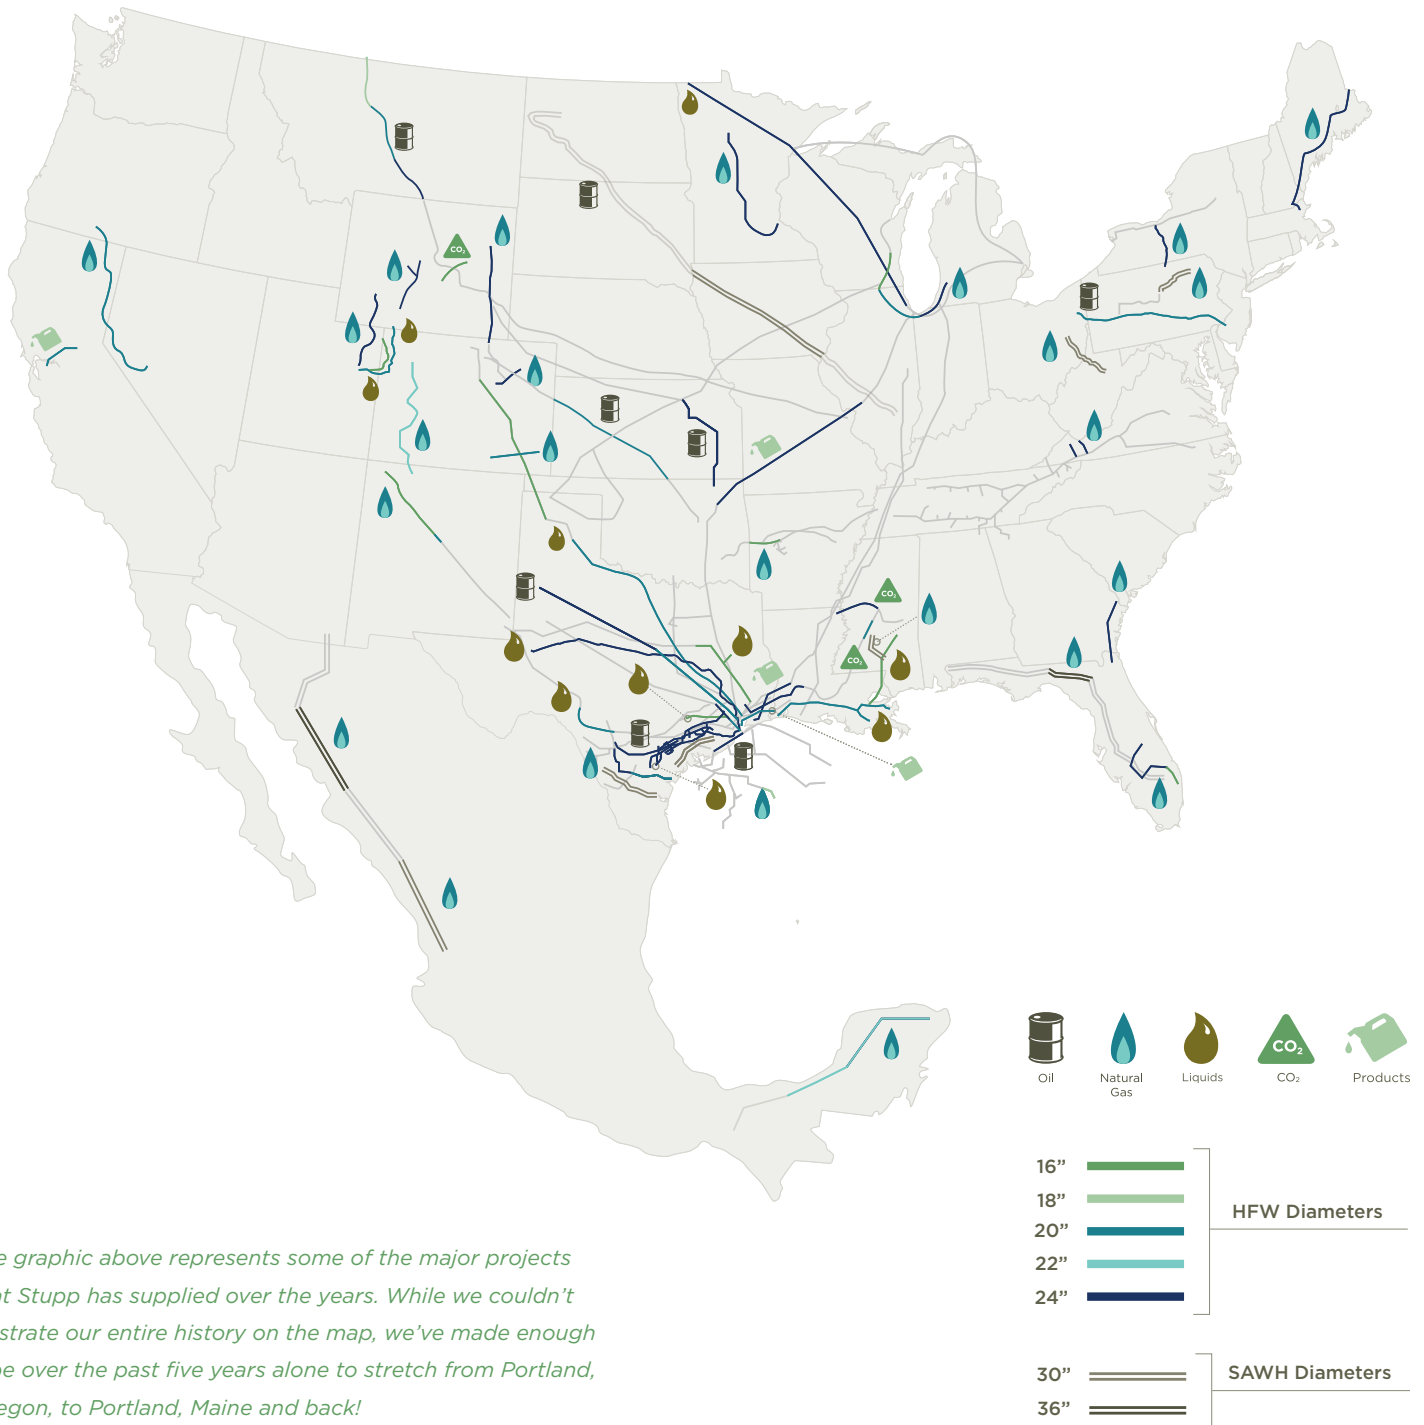

In 1969, Stupp engineered the concept of custom pipe sizes and steel grades so that our customers could have a more cost-efficient product that met their intended pipeline pressure. But we didn't stop there... Since then, Stupp has led the industry with "firsts" like 80-foot lengths designed to save our partners time and money beyond the mill. And today, we're proud to help proactive operators meet PHMSA's traceable, verifiable, and complete requirements by joining with SPOT Technologies to provide an electronic trail documenting a pipeline's pedigree from steel melt to the ditch.

Experience

For more than six decades, Stupp has been helping make America's quest for energy independence a reality. Although we actually hold the oldest active API 5L license of any producer in the United States, our track record extends much further. With projects spanning the globe from Albuquerque to Australia, there's no application that our skilled production team and logistics professionals can't handle.

The graphic above represents some of the major projects that Stupp has supplied over the years. While we couldn't illustrate our entire history on the map, we've made enough pipe over the past five years alone to stretch from Portland, Oregon, to Portland, Maine and back!

Quality

At Stupp, quality is more than just a slogan. It surrounds every project we undertake. In fact, we place such a high priority on our role in ensuring public safety that over a quarter of our employees belong to the quality assurance department. From our rigorous, self-imposed testing standards to our custom-designed digital x-ray inspection, you can rest assured that the pipe you receive will meet or exceed your specification. **ISO 9001 Registered | API 5L & 5CT Licensed**

About Stupp Bros., Inc.

Stupp Corporation is a division of Stupp Bros., Inc., a privately-owned company devoted to shaping infrastructure development in the United States and abroad. Out of our four facilities in St. Louis, Missouri; Baton Rouge, Louisiana; and Bowling Green, Kentucky; Stupp produces the essential materials, engineering, and financial services to build pipelines, bridges, high-rise buildings, sports facilities, and specialized equipment for customers in both the private and public sectors. With the rare stability of over 150 years of continuous family ownership, our customers have confidence knowing that Stupp stands behind our products and services for the long haul.
